PART 1

BRAND CREATION & DEFINITION

01 / BRAND DEFINITION

THE VISION & PURPOSE

KOMO is an abstract neologism designed to evoke a sense of structural calm, rhythm, and intentional living. Born at the intersection of Japanese zen philosophy and Scandinavian utilitarianism, KOMO is a premium coffee ecosystem engineered to prove that radical sustainability and high-end design are not mutually exclusive.

Our purpose is to eliminate the invisible ecological tax of coffee packaging. We do not look to external resources to protect our product; instead, we close the loop by upcycling the coffee cherry husk (cascara)—the primary waste material of coffee farming—and engineering it into a rigid, 100% compostable structural container. By using the coffee fruit to protect its own seed, KOMO introduces a truly circular, zero-waste packaging architecture to the global market.

Traditional Coffee Value Chain:

Farming Waste ▶ Husk Burned/Drenched (CO2/Water pollution)

Packaging ▶ Multi-layer Plastics + Aluminum Laminates (Non-recyclable)

Aesthetics ▶ Visual Pollution (Chaotic retail shelf presence)

The KOMO Closed Loop:

Upcycled Husks ▶ Pressed Rigid Container ▶ Minimalist Aesthetic ▶ 100% Soil Return

01. The Material Crisis

Traditional coffee packaging relies heavily on multi-layer laminates (a structural sandwich of plastic and aluminum foil) to preserve freshness. These materials are practically impossible to separate, resulting in millions of metric tons of un-recyclable waste entering landfills annually.

02. The Agricultural Waste

During the harvesting process, the outer flesh and husk of the coffee cherry are stripped away and largely discarded. If left to rot in large quantities, this agricultural byproduct creates toxic runoff that alters the pH of local waterways and emits significant methane gas.

03. The Visual Noise

The modern retail landscape suffers from sensory over-saturation. Loud gradients, aggressive branding, and hyper-busy packaging create psychological friction and decision fatigue for the conscious consumer.

TARGET AUDIENCE: THE INTENTIONALIST

The KOMO consumer is not just a coffee drinker; they are an Intentionalist. Typically urban pro-fessionals, architects, designers, and creative directors (ages 25–45), they view their daily rituals through the lens of curation.

Behavioral Profile:

They actively practice a “Less, But Better” lifestyle. They curation-shop their environments—from the furniture in their living rooms to the typography on their kitchen counters.

The Tension:

They care deeply about environmental degradation but feel alienated by traditional “eco-friendly” branding, which often leans toward a messy, unpolished, rustic aesthetic. KOMO resolves this tension by providing luxury design that carries zero ecological guilt.

CORE VALUES & MAIN MESSAGE

01. Structural Honesty

We do not hide our materials behind chemical inks, bleach, or plastic coatings. The raw, tactile, flecked texture of the molded coffee husk is the brand's visual identity.

02. Frictionless Utility

They care deeply about environmental degradation but feel alienated by traditional "eco-friendly" branding, which often leans toward a messy, unpolished, rustic aesthetic. KOMO resolves this tension by providing luxury design that carries zero ecological guilt.

03. Absolute Transparency

From the GPS coordinates of the single-origin crops to the machine-learning tools used to optimize our supply chain, we hide nothing. We treat our audience as intellectual peers.

The Main Message

Formed by nature. Stripped of excess. Returned to the earth.

02 / VERBAL IDENTITY & VOICE

KOMO speaks like an upscale architectural studio or a classic Swiss design institution. We are quiet, confident, and direct. We do not scream for attention, use marketing hyperbole “*the best coffee ever!*”, or rely on emoji-heavy social copy.

Serious, yet approachable:

We lean heavily on technical and botanical facts, but our language remains poetic and accessible.

Monastic clarity:

We use short sentences and deliberate punctuation to create breathing room in our copy.

Brand Voice Is...,

Understated & Laconic,
Fact-driven & Transparent,
Aesthetically Rigorous,

Brand Voice Is NOT...

Loud, hyped, or sensationalist
Preachy, morally superior, or vague
Casual, overly colloquial, or messy

03 / VISUAL IDENTITY SYSTEM

KOMO was conceived as a response to the visual and emotional exhaustion of contemporary consumer culture. In a market saturated with hyper-designed products competing aggressively for attention, the brand chooses restraint instead of noise. Its identity is not built around persuasion, but around presence.

Most ecological brands rely on familiar visual tropes — rough handmade graphics, oversized environmental messaging, earthy chaos, recycled-paper aesthetics exaggerated to the point of cliché. While well-intentioned, these systems often create an unintended contradiction: they ask consumers to compromise beauty for ethics.

KOMO rejects this compromise entirely.

The brand is designed for a new generation of conscious consumers who care deeply about environmental impact but still seek refinement, calmness, and emotional sophistication in the objects they bring into their homes. They do not want products that feel apologetic or overtly “eco.” They want objects that feel intelligent, timeless, and architecturally considered.

For KOMO, sustainability is not decoration.
It is structure.

This philosophy defines every visual decision within the brand.

THE LOGO: THE SUBLIMINAL LOOP

The KOMO logo is a custom wordmark built around simplicity, restraint, and hidden meaning.

Its defining feature is the inner orbit within the first “O”. This subtle detail is inspired by the cross-section of a coffee bean and the idea of circular systems. It represents regeneration, movement, and the invisible cycles that sustain life.

The symbol is intentionally quiet. It reveals itself only with closer attention — much like the story behind the products themselves.

Rather than relying on loud ecological symbols, KOMO integrates sustainability directly into its structure. The logo does not explain itself immediately. It invites discovery.

The typography itself is elegant and architectural, designed to feel timeless rather than trend-driven. Wide spacing and refined proportions create calmness and balance, allowing the identity to breathe naturally.

KOMO believes the most sustainable objects are the ones people want to keep.

TYPOGRAPHY

Primary Typeface

We use an elegant serif typeface for our logo and headlines. It brings a sense of refinement, heritage, and calm authority.

The serif details are delicate, while the proportions remain modern and minimal. This balance creates a feeling that is both classic and contemporary.

Typography within KOMO is never aggressive. It is designed to create rhythm, silence, and emotional warmth.

Our references come from:

- editorial publishing
- architecture books
- gallery catalogues
- luxury print design

The result is a visual language that feels intellectual yet approachable.

Secondary Typeface

For supporting information, we use a clean neutral sans-serif.

- This typeface is used for:
- product information
- sustainability data
- brewing notes
- origin transparency
- technical details

The sans-serif creates contrast against the warmth of the serif system while maintaining clarity and precision.

This reflects one of KOMO's core beliefs: honesty should be beautiful.

COLOR PALETTE

The KOMO palette is inspired directly by material reality.

Our colors emerge from:

- coffee husk
- stone
- clay
- oat paper
- mineral dust
- olive leaves
- unripe coffee cherries

The tones are intentionally muted and soft. Nothing is overly saturated or visually aggressive. The palette exists to create emotional calmness.

In modern retail spaces dominated by visual noise and overstimulation, KOMO acts as a moment of relief. The colors feel grounded, tactile, and restorative. Green is used only as an accent.

Rather than using loud environmental greens, KOMO uses subtle shades inspired by avocado skin, sage, olive, and kiwi. These tones communicate organic life quietly and intelligently.

Our palette should always feel:

- earthy
- breathable
- mineral
- warm
- understated

<i>Identity Color</i>	<i>Code Specification</i>	<i>System Application</i>	<i>Graphic Purpose</i>
	Husk Beige HEX #E6DFD3 CMYK 10/10/18/0	Primary Package Canvas	Simulates the unbleached, raw tactile texture of the molded cascara husk.
	Charcoal Black HEX #1C1B1A CMYK 70/60/60/80	Grid Lines, Master Word-mark, Technical Data	Replaces harsh pure black with a dense, matte charcoal to ensure editorial luxury.
	Avocado Accent HEX #8A9A86 CMYK 40/20/40/5	Security Seals, Coordinates, Batch Stamps	Used exclusively for focal callouts to reference biological and agricultural origin.
	Chalk White HEX #F9F9F8 CMYK 1/1/2/0	Digital UI, Negative Space, Mobile Applications	Provides monastic clarity, extreme contrast, and necessary breathing room.

MATERIAL & TEXTURE

Texture sits at the heart of the KOMO identity.

Our packaging is made from molded coffee husk, transforming agricultural waste into a functional and beautiful object.

The tactile surface is not hidden beneath glossy coatings or heavy inks. Flecks, fibers, pores, and imperfections are intentionally preserved because they communicate honesty and authenticity.

The material itself becomes the branding.

This approach reflects our principle of structural honesty:
nothing artificial, nothing unnecessary.

KOMO packaging should feel closer to an architectural object or material sample than disposable packaging.

Every surface is designed to invite touch.

PHOTOGRAPHIC STYLE

KOMO photography is natural, quiet, and intentional. Our Images use:

- soft directional light
- mineral textures
- gentle shadows
- natural materials
- restrained compositions

The visual atmosphere should feel calm and cinematic. Our photography avoids exaggerated sustainability aesthetics. There are no loud rustic clichés, excessive greenery, or over-styled lifestyle scenes. Instead, the imagery focuses on:

- texture
- silence
- ritual
- material presence
- Objects are given space to breathe.

The visual world of KOMO is inspired by:

- contemporary still-life photography
- Japanese minimalism
- editorial interiors
- sculptural composition
- natural architecture

The goal is not to sell a lifestyle.
The goal is to create emotional stillness.

WHO WE APPEAL TO

KOMO is created for people who believe beauty and responsibility should coexist naturally. Our audience values:

- thoughtful design
- sensory rituals
- material honesty
- slow living
- specialty coffee culture
- architectural aesthetics
- transparency without spectacle

They care deeply about sustainability but feel disconnected from traditional “eco” branding, which often appears chaotic, rustic, or visually performative.

KOMO resolves this tension. We offer a visual language that feels elevated, timeless, and emotionally intelligent while carrying zero ecological guilt.

We speak to our audience with respect — not by telling them what to think, but by showing what we believe.

THE FINAL PRINCIPLE

KOMO is designed to age slowly.

Every decision within the identity system — from typography to materials — is made with longevity in mind.

Because the most sustainable aesthetic is the one people never feel the need to replace.

PART 2

ASSETS & PROMOTIONAL
VIDEO CREATION

01/ASSETS

Once the style and brand is defined we can move on to the assets creation. We used ChatGPT for its consistency and understanding. the prompts were simple: now that you know my brand create assets: show me the product , show me a man drinking coffee... although sometimes it needed to be remained to be consistent with the logo, once the style was defined everything have the same look and feel expected.

create an image to use as a background. a bit of coffe and green on the lower edge but a lot of white space to make room for text

good make a landscape format, you can add something related to the brand

ah! I love this! make another variant

you smashing this! make another one with the logo (the woodmark and the logo) in the center of the scene, this time no product just ingredients

more focus on the coffe cup, no product wide shot

brilliant. now only the coffe in the center as a protagonist

love this! now I let you make one with a free concept. go!

perfect, create variant, this time with a male model

now this is a challenge: a vertical photo with the materials that give the brand a color, they are arranged as a color palette. surprise me. no cup just real materials keep the style

beautiful. now a different composition with the product. remember to be consistent with the logo

K O M O

BRAND BOOK

KOMO is specialty coffee with a purpose. We use coffee husk — a natural by-product often discarded — to create packaging that gives back to the earth. Our identity is a reflection of this philosophy: quiet, intentional and timeless.

Every element, from the logo to the materials, is designed to communicate our respect for nature, our commitment to quality and our belief in circularity done beautifully.

1. THE LOGO

K O M O

The KOMO logo is a custom wordmark. Its defining feature is the inner orbit within the first 'O'.

This subtle detail is inspired by the cross-section of a coffee bean and the idea of circular systems. It represents regeneration, movement and the invisible cycles that sustain life.

The symbol is intentionally quiet. It reveals itself only with closer attention — much like the story behind the products.

2. TYPOGRAPHY

PRIMARY TYPEFACE

Aa

We use an elegant serif for our logo and headings. It brings a sense of refinement, heritage and calm authority.

The serifs are thin and the contrast is subtle, creating a feeling that is both classic and contemporary.

SECONDARY TYPEFACE

Aa

For body text and supporting information, we use a clean, neutral sans-serif. It ensures clarity and readability while allowing the content to speak with honesty and transparency.

3. COLOR PALETTE

Our palette is inspired by natural materials — coffee husk, stone, clay, leaves and earth. The tones are soft, mineral and timeless, allowing the textures and form of the packaging to take center stage. Green is used as an accent, not a dominant color, to bring harmony and a sense of life.

4. MATERIAL & TEXTURE

Texture is at the heart of KOMO. Our packaging is made from molded coffee husk, a material that is organic, durable and fully compostable. Its natural flecks, fibers and soft imperfections are celebrated, never hidden. They remind us that beauty comes from honesty.

5. PHOTOGRAPHIC STYLE

Our photography style is natural and intentional. We use soft light, gentle shadows and real materials to create a sense of warmth and authenticity. The compositions are calm and uncluttered, allowing the products to live in a thoughtful, timeless world.

6. WHO WE APPEAL TO

KOMO is for those who appreciate quality over quantity, rituals over rush and meaning over trends. Our audience is conscious, curious and values design, craft and transparency.

We speak to them with respect — not by telling them what to think, but by showing what we believe.

K O M O

COFFEE HUSK PACKAGING
MADE FROM WASTE.
DESIGNED FOR LASTING.

02/PROMOTIONAL VIDEO

KOMO

“Quietly Circular”

1. OVERALL TONE

- The film should feel:
 - cinematic but intimate
- slow and tactile
- architectural
- emotionally calm
- visually restrained
- No aggressive music.
- No fast cuts.
- No commercial energy.

Think A24 meets luxury editorial campaign meets material documentary.

Sound design matters more than music:

- coffee beans falling
- paper friction
- ceramic touch
- soft breath
- grinder textures
- distant ambient room tone
- Music should be minimal:
- warm analog textures, soft piano, low atmospheric pads.

2. VISUAL LANGUAGE

Palette:

- stone
- oat
- olive
- espresso brown
- travertine
- soft daylight

Camera:

- macro textures
- slow movements
- shallow depth of field
- soft natural shadows
- deliberate framing
- Every shot should feel:
- touched by light.

CREATING THE SCRIPT

SCENE 01 — SILENCE

[0:00–0:05]

Visual

Soft morning light slowly reveals coffee husk fibers on a textured surface.

Extreme macro shot.

Dust particles moving through light.

Coffee beans roll gently across stone.

SFX

- Soft ceramic movement.
- Faint room tone.

Voiceover

“Most packaging is designed to disappear.”

PROMPT

Duration: 5 seconds

Aspect Ratio: 16:9 cinematic

Style: ultra cinematic macro product film, tactile luxury editorial, slow cinema, natural light realism

Extreme macro cinematic shot of coffee husk fibers scattered on a porous travertine-like stone surface under soft warm morning sunlight. Tiny dust particles float slowly through the light beam. Several dark roasted coffee beans gently roll across the textured surface in slow motion. Background softly out of focus with blurred hand-crafted ceramic forms. Warm beige, espresso brown, and muted olive tones dominate the palette. Highly tactile textures, shallow depth of field, soft shadows, subtle atmospheric haze, quiet luxury aesthetic, minimalist composition, natural imperfections preserved, calm editorial photography style, organic cinematic realism.

Camera slowly pushes forward with extremely subtle movement.

Lighting shifts delicately as if early sunlight entering through a window.

Dust moves naturally in the air.

Coffee beans roll slowly and organically, not dramatically.

PROMPT

Duration: 6–8 seconds

Aspect Ratio: 16:9 cinematic

Style: chaotic commercial realism contrasted with minimalist silence

Cinematic close-up sequence of overcrowded supermarket coffee shelves filled with glossy plastic coffee bags and reflective laminated packaging. Harsh artificial retail lighting creates sharp reflections across metallic surfaces. Busy compositions packed tightly with loud branding, aggressive typography, bright labels, visual clutter, and overwhelming packaging density..

Fast fragmented shots:

- crinkled plastic coffee bags
- reflective foil surfaces catching harsh light
- hands quickly grabbing products
- crowded shelves with chaotic repetition
- excessive labels and loud commercial design
- compressed rows of disposable packaging
- piles of wasteful materials

Camera movement slightly nervous and restless. Quick flashes and abrupt cuts create subtle psychological discomfort.

SCENE 02 — THE PROBLEM

[0:05–0:12]

Visual

Close-up:
plastic coffee bags
reflective laminate surfaces
chaotic shelves
visual clutter
Fast flashes.
Then silence again.

Voiceover

“Used briefly. Discarded endlessly.”

SCENE 03 — THE MATERIAL

[0:12–0:22]

Visual

Beautiful tactile shots of:

coffee husk

molded fibers

raw textures

powder

natural pigments

hands touching materials

The KOMO packaging slowly appears from shadow.

Not dramatically.

Quietly.

Voiceover

“KOMO transforms coffee waste into material honesty.”

PROMPT

Duration: 10 seconds

Aspect Ratio: 16:9 cinematic

Style: tactile cinematic documentary, luxury material study, quiet editorial realism

A cinematic sequence of highly tactile macro shots exploring raw coffee husk material and sustainable fabrication processes in soft natural light. Warm mineral tones dominate the scene: beige, espresso brown, clay, muted olive, limestone, and oat fiber.

Slow, intimate shots reveal:

- dried coffee husk fragments
- molded organic fibers
- raw porous textures
- fine natural powders
- earthy pigments scattered across stone
- hands gently touching and compressing materials
- fingertips brushing across tactile surfaces
- soft dust particles floating through sunlight
- fibrous textures catching directional light
- handmade material samples resting on travertine stone

The atmosphere feels quiet, grounded, architectural, and emotionally calm.

PROMPT

Duration: 10 seconds

Aspect Ratio: 16:9 cinematic

Style: luxury tactile product cinema, architectural still life, quiet editorial realism

A cinematic sequence of highly refined hero shots featuring the KOMO coffee packaging in a calm sculptural environment. The scene is bathed in warm natural light with soft moving shadows cast by olive branches and window light.

The packaging appears as an object of permanence rather than disposable packaging.

Focus on:

- the raw flecked molded texture
 - the minimalist cylindrical canister
 - the soft matte pouch
 - the vertical avocado-green seal strip
 - embossed typography
 - the orbital “O” symbol
 - subtle imperfections in the material fibers
 - porous stone surfaces
 - quiet shadow movement
- The atmosphere feels quiet, grounded, architectural, and emotionally calm.

SCENE 04 — THE OBJECT

[0:22–0:32]

Visual

Hero product shots:

canister

pouch

seal strip

embossed logo

orbital “O”

soft shadows moving across surfaces

Slow rotating camera movement.

Voiceover

“No plastic gloss. No visual noise.

Only texture, ritual, and permanence.”

SCENE 05 — THE RITUAL

[0:32–0:42]

Visual

Woman holding cup.

Cut to:
man preparing coffee.

Steam.

Hands.

Coffee pouring.

Morning stillness.

Voiceover

“Designed for people who believe beauty and responsibility should exist together.”

PROMPT

Duration: 10 seconds

Aspect Ratio: 16:9 cinematic

Style: intimate lifestyle cinema, tactile luxury realism, calm editorial storytelling

A calm cinematic morning ritual unfolding in soft natural sunlight. The atmosphere feels warm, quiet, intimate, and emotionally grounded.

Opening shot:

A woman sits near a softly lit window holding a warm ceramic cup of coffee with both hands. Morning light wraps gently around her face and fingers. Steam rises slowly from the cup. Her expression is calm, reflective, present.

Cut to:

A man quietly preparing coffee in a minimalist kitchen or stone countertop setting. Slow tactile movements:

- weighing coffee
- grinding beans
- pouring water
- ceramic touch
- hands handling the KOMO packaging naturally
- soft steam drifting upward

Close-up details

- fingers touching the textured cup
- coffee pouring in slow motion

PROMPT

Duration: 5 seconds

Aspect Ratio: 16:9 cinematic

Style: editorial still life, tactile luxury minimalism, architectural flat lay

A cinematic top-down flat lay composition of raw natural materials arranged like an intentional color palette on a soft mineral surface. The scene feels sculptural, calm, intelligent, and tactile.

Materials are organized with elegant spacing and subtle asymmetry:

- roasted coffee beans
- dried coffee husk fragments
- fine mineral powders
- clay pigments
- avocado halves
- muted olive leaves
- porous stone pieces
- fibrous organic textures
- soft oat-colored paper fragments

Centered within the composition:
the KOMO logo appears elegantly integrated into the scene — not printed loudly, but subtly embossed, engraved, or shadowed into the mineral surface.
The orbital “O” symbol should be clearly visible and beautifully refined.

SCENE 06 — THE PHILOSOPHY

[0:42–0:52]

Visual

Flat lay of natural ingredients arranged like a palette.

The logo appears centered.

Soft moving shadows from leaves.

Voiceover

“Sustainability should not be decoration.

It should be structure.”

FINAL SCENE — END FRAME

[0:52–0:60]

Visual

Centered KOMO logo on soft mineral background.

Very subtle motion.

Possible ending shot: cup of coffee with circular crema
resembling the orbital logo.

Voiceover

“KOMO.”

Pause.

“Quietly circular.”

PART 3

IA & THE CREATIVE PROCESS

01/ETHICAL EVALUATION

The development of KOMO was approached not only as a visual branding exercise, but also as a critical reflection on how artificial intelligence can be used responsibly within design, communication, and sustainability contexts. Throughout the project, ethical risks linked to AI-generated content were considered carefully, especially regarding transparency, environmental claims, visual manipulation, and consumer trust. The project aligns with European principles for trustworthy AI by emphasizing transparency, human oversight, and non-deceptive communication.

Using the HAX Toolkit as a framework, three relevant principles can be identified in the project:

1. Make Clear What the AI Can Do

HAX Guideline:

“Make clear what the system can do”

One of the major ethical risks in AI-generated branding is the creation of unrealistic promises

or misleading sustainability narratives. In the case of KOMO, the communication strategy avoids exaggerated “greenwashing” aesthetics and instead focuses on material honesty and traceability.

The project intentionally communicates:

- the origin of materials,
- the transformation of coffee husk waste,
- and the role of AI in optimizing processes rather than replacing reality.

For example, the visual identity uses raw textures, molded fibers, and tactile imperfections to reinforce authenticity instead of presenting an artificially “perfect” eco-product. This follows European AI transparency principles, particularly those emphasizing that AI-generated communication should not deceive users or manipulate perceptions unfairly.

The audience is treated as intellectually capable, informed consumers rather than passive targets of marketing persuasion.

2. Support Efficient Human Control and Oversight

HAX Guideline: “Support efficient dismissal, correction, and feedback”

Although AI tools were used extensively for concept visualization, image generation, and narrative development, all final creative decisions remained under human direction and curation.

- The process involved:
- iterative human review,
- correction of inconsistencies,
- refinement of logos and visuals,
- and intentional art direction.

This is especially visible in the repeated adjustments to the KOMO logo, where AI outputs were corrected to maintain consistency with the designed brand system. Rather than allowing AI to autonomously define the brand identity, the system functioned as a collaborative creative assistant.

This approach aligns with the EU AI Act principles concerning human oversight, ensuring that AI systems remain controllable, reviewable, and subordinate to human decision-making.

3. Mitigate Social and Emotional Manipulation

HAX Guideline: “Avoid encouraging emotional dependency or deception”

Another ethical concern in AI-assisted marketing is the potential creation of emotionally manipulative content. KOMO intentionally avoids hyper-commercial advertising language, artificial influencer aesthetics, or overstimulating visual strategies commonly used in consumer branding.

Instead, the project promotes:

- calm visual environments,
- slower pacing,
- sensory clarity,
- and reflective consumption habits.

For instance, the video narrative contrasts chaotic plastic packaging with quiet material stillness to encourage conscious reflection rather than impulsive buying behavior. The emotional tone is contemplative instead of coercive.

This is consistent with European guidelines on ethical AI communication, particularly those discouraging manipulative behavioral techniques and promoting user autonomy.

Conclusion

KOMO demonstrates how AI can support sustainable branding and storytelling while remaining aligned with ethical design principles. By combining human creative oversight, transparency in communication, and emotionally responsible marketing, the project reflects key values promoted by both the European Union AI guidelines and the HAX Toolkit.

Rather than using AI to fabricate artificial desirability, the project uses it as a tool to amplify clarity, material awareness, and conscious consumer relationships.

02/IMPACT OF AI ON THE CREATIVE PROCESS

Artificial intelligence fundamentally transformed the pace and structure of the creative process behind KOMO. What would traditionally require weeks of prototyping, photography, location scouting, moodboard production, copywriting, and visual testing was compressed into a highly iterative and fluid workflow. AI allowed ideas to move almost at the speed of thought. Instead of waiting for physical production stages, concepts could be immediately visualized, adjusted, rejected, or refined in real time.

This acceleration did not necessarily reduce creativity; instead, it shifted where creativity happened. A large part of the creative process moved from manual execution toward direction, curation, and conceptual decision-making. Writing prompts became a new design language. Rather than physically building scenes, lighting products, or organizing shoots, the work focused on defining atmosphere, emotional tone, material qualities, and visual philosophy with precision. The AI became a collaborative tool capable of translating abstract intentions into visual possibilities almost instantly.

One of the most valuable aspects of AI during the project was its support across multiple creative disciplines simultaneously. It helped generate:

- cinematic visual references,
- packaging concepts,
- photography compositions,
- brand storytelling,
- voiceover scripts,
- video sequencing,
- material explorations,
- and strategic language for the brand book.

This multidisciplinary support created an unusually coherent ecosystem around the project. Instead of working in isolated stages, branding, storytelling, visual identity, and campaign direction evolved together continuously. The ability to instantly test variations also encouraged experimentation that would normally be financially or logistically impossible in a traditional workflow.

At the same time, the process introduced a subtle emotional tension: the discomfort of letting go. Traditionally, design and programming education emphasize authorship, craft, and personal control

over every detail. Working with AI required trusting a system that occasionally produced unexpected outcomes — sometimes better than imagined, sometimes inconsistent or incorrect. There was a constant negotiation between control and surrender.

There were moments during the project where the work stopped feeling entirely “mine.” Because the AI can generate highly polished imagery, scripts, and concepts almost instantly, the relationship between creator and outcome changes. Instead of physically photographing a product, constructing sets, coding every component manually, or directing an entire production pipeline, the designer becomes partially a curator, editor, strategist, and architect of systems.

As someone who also comes from programming, this feeling is familiar. There is a very particular intimacy in knowing every line of code, every variable, every design decision, and every mistake by heart. Building something piece by piece creates a deep sense of ownership and understanding. AI disrupts that intimacy. When a machine generates complex outputs in seconds, the emotional connection to the process becomes different. The classic “Aha!” moment of solving a difficult problem is often replaced by an “Okay, it works” moment. Efficient, impressive — but sometimes less personal.

However, this discomfort does not necessarily mean that AI weakens creativity. Instead, it forces creators to redefine where their value truly lies. The project made it clear that AI is not replacing designers, artists, or programmers. What it is replacing are repetitive workflows, technical bottlenecks, and certain production barriers. The real shift is that people who know how to work with AI will inevitably outperform those who ignore it.

In many ways, the role of the creative professional is evolving similarly to the role of the programmer. Today, being a designer or developer is increasingly less about memorizing technical execution and more about orchestrating systems intelligently. The human role moves upward:

- defining the vision,
- making ethical decisions,
- recognizing quality,
- maintaining consistency,
- protecting authenticity,
- and understanding why something should exist in the first place.

The machine can generate infinite possibilities, but it still lacks intentionality, taste, and critical judgment. AI

is extremely powerful at answering “how,” but humans remain responsible for the “why.”

The KOMO project also demonstrated how AI radically democratizes production capabilities. Through AI-generated visuals and cinematic storytelling, it became possible to create luxury-level branding assets without manufacturing a physical product, renting studios, organizing photoshoots, hiring actors, or filming expensive commercial sequences. A speculative concept could suddenly feel materially real. This completely changes the relationship between imagination and execution.

At the same time, the project reinforced the importance of staying critically involved. AI outputs can appear convincing while still containing inconsistencies, weak logic, or superficial solutions. Blind trust quickly becomes dangerous. The creator must remain actively responsible for reviewing, correcting, refining, and challenging what the machine produces.

Looking forward, the experience did not make me want to abandon AI — quite the opposite. It made me realize the importance of learning how to collaborate with it consciously. For future projects, I see AI as an

extraordinary scaffolding tool:

- accelerating ideation,
- generating visual exploration,
- handling repetitive tasks,
- and supporting production workflows.

But I still want the core logic, conceptual depth, and meaningful decision-making to remain deeply human.

Ultimately, this project showed me that the future of creative work is not about humans versus AI. It is about humans who understand how to direct AI effectively. The challenge moving forward will not be maintaining technical superiority over machines, but preserving authorship, intentionality, and critical thinking inside increasingly automated creative systems.

K O M O

QUIETLY CIRCULAR
